

Dangl.AVA & Dangl.GAEB Libraries

The Dangl.AVA & Dangl.GAEB libraries are solutions for working with all GAEB file types and have additional modules for Json and Microsoft Excel import / export. Dangl.AVA offers a unified project model that can be converted from and to any of the other formats. All of the functionality offered by the GAEB standard is supported. Over 175.000 automated tests are run on every commit across all supported frameworks. Examples of the libraries usage can be found at <https://github.com/GeorgDangl/Dangl.AVA.Examples>
